Disclaimer

This document and its contents have been prepared and are intended solely for the client's information and use in relation to Faithful+Gould's submittal of services and deliverables as described in PNNL Work Order 1.

Faithful+Gould assumes no responsibility to any other party in respect of or arising out of or in connection with this document and/or its contents, whether for continuation of this project or for any other project. Any reuse without written verification or adaptation by Faithful+Gould for the specific purpose intended will be at user's sole risk and without liability or legal exposure to Faithful+Gould.

Faithful+Gould has no control over the cost of labor and materials, general contractor's or any subcontractor's method of determining prices, or competitive bidding and market conditions. The data in this report represent an opinion of probable cost of construction and is made on the basis of the experience, qualifications, and best judgment of the professional consultant familiar with the construction industry. Faithful+Gould cannot and does not guarantee that proposals, bids, or actual construction costs will not vary from this or subsequent cost estimates.

1. Introduction and Purpose

- 1.1. Faithful+Gould has been retained by Pacific Northwest National Laboratory (PNNL) as described in the Statement of Work; Work Order 1, to provide cost data for installation of various energy efficiency measures in new low-rise residential buildings. The Work Order requests cost data in the form of deliverables for Sub-Tasks 1 to 6. Subtasks 1 to 3 deliverables were subject to a 19th August 2011 submission date, with the remaining submitted in the Report, dated 20th September 2011. Updates to data submitted on 19th August and 20th September 2011 are included in this Report. Unit rates contained within this Report are reflective of 4th Quarter, 2011.
 - 1.1.1. Subtask 1: Prototype Home Estimate and Cost Database for Various Published Codes/Standards Descriptions and Preliminary Data for the 2009 IECC
 - 1.1.2. Subtask 2: Cost Data Collection for 50% Better Code Development Description
 - 1.1.3. Subtask 3: Raw Data submitted in comma-delimited format
 - 1.1.4. Subtask 4: Prototype Home Estimate and Cost Database for Various Published Codes/Standards Descriptions and Preliminary Data for the 2006 and 2012 IECC
 - 1.1.5. Subtask 5: Report on Data Additional to Subtask 2
 - 1.1.6. Subtask 6: Raw Data submitted in comma-delimited format
- 1.2. This exercise supports PNNL's initiative to develop the Building Component Cost Community Tool (BC3), designed to assist cost estimators, builders, architects and engineers to evaluate potential cost of energy efficient components. The tool will also serve as a central DoE repository for neutral cost data tied to buildings at component level.
- 1.3. The content of this Report does not include data for commercial buildings. The Statement of Work for Commercial Buildings is expected to be included in a future Work Order.

2. Subtask 1: Prototype Home Estimate, Cost Database and Preliminary Data for the 2009 IECC

2.1 OVERVIEW

- 2.1.1. The report on Subtask 1 contains the following sub-headings
 - 2.1.1.1. Approach to Data Collection
 - 2.1.1.2. Prototype Home Estimating Methodology and Approach
 - 2.1.1.3. Estimated Cost for Prototype Single-Family Home (Baseline Cost)
 - 2.1.1.4. Prototype Home Alternates Analysis
 - 2.1.1.5. Applied Geo-Cost Modifiers for Locations within Each Climate Zone
 - 2.1.1.6. Preliminary Data for the 2009 IECC
 - 2.1.1.7. Cost Database for Various Published Codes/Standards Descriptions

2.2 APPROACH TO DATA COLLECTION

- 2.2.1 To perform credible cost comparisons for improved energy components it is important to establish a consistent scope baseline. This basis has been guided by the characteristics outlined in the Work Order. To align as close as possible to these parameters we have used the actual design of a single family home constructed in 1997 and based in Climate Zone 6. The intent is to accurately capture a baseline cost to undertake national comparisons for both geo-modifiers and climate related energy efficiency code variances
- 2.2.2 From this prototype home we have applied industry standard measurement techniques and have estimated probable costs using RS Means 2011 as the main reference point for labor productivity. Material costs have been arrived from various sources, including manufacturers' quotes, internal data and other sources as applicable.

2.3 PROTOTYPE HOME ESTIMATING METHODOLOGY AND APPROACH

- 2.3.1 The following section describes the general estimating approach and methodology for the Prototype (Baseline Cost).

2.3.2 PROJECT WORK BREAKDOWN STRUCTURE

- 2.3.2.1 Faithful+Gould has recommended to PNNL, the Uniformat II cost coding structure for this project. This is an industry standard and widely recognized work breakdown structure that identifies project components in the form of an 'elemental' breakdown. The Prototype Estimate has been coded in accordance with Uniformat II. Further information can be found at www.uniformat.com

2.3.3 ESTIMATE ACCURACY

- 2.3.3.1 This estimate currently falls under the AACE definition of a Class 1 Estimate. Class 1 Estimates are based upon a range of 50% to 100% Project Definition and are prepared to form the basis of Study or Feasibility. Class 1 Estimates have an expected accuracy range on the low side of -3% to -10% and +3% to +15% on the high side, at a 90% confidence level. The expected accuracy ranges vary depending upon the technological complexity of the project. Based upon a high level feasibility scope, this estimate is approximately at the mid-point of the range and is therefore expected to have an accuracy range of -10% to +10%. This accuracy range represents an 'Opinion of Probable Construction Cost'.

2.3.4 BASIS OF PRICING

- 2.3.4.1 Pricing to obtain baseline cost reflects probable construction costs for 1st quarter 2011 and is based on a nationwide average². Actual pricing may vary by geographical region, locality, micro-economic conditions, quantity of materials purchased, sales tax, union versus non-union labor etc. Pricing notes have been provided for the Prototype Estimate in Appendix A and the cost data collection included in Appendices C and E.
- 2.3.4.2 General Contractor's General Conditions, Overhead and Profit are included and calculated at 11%
- 2.3.4.3 A pricing contingency of 2.5% has been included in the total estimate as an allowance.

2.3.4.4 Escalation is included at 0.52%, based on 2.5% per annum, to the construction midpoint based on a four month theoretical schedule in summer of 2012.

2.3.5 DRAWINGS AND SPECIFICATIONS

2.3.5.1 The Estimate for the Prototype Home has been guided by the Single-Family Characteristics as described in the Work Order and is varied where appropriate based upon the design included in Appendix B of this Report. The attached design has been used for the baseline take-off and quantification.

2.3.5.2 Table 2.3 shown below compares the characteristics outlined in the Work Order with that of the Baseline Cost Model.

Table 2.3 Comparison of Prototype Home Characteristics

| Parameter | Work Order Assumption Characteristics | Prototype Cost Model Characteristics |
|--|---|--|
| Conditioned Floor Area | 2,400sf | 2,418sf |
| Footprint and Height | 30ft by 40ft, two storey, 8.5ft high ceilings | 24ft by 40ft, two storey, plus 20ft x 24ft third storey, 8.2ft high ceilings |
| Area above unconditioned space (over a vented crawl space or unconditioned basement) | 1,200sf | 960sf (see alternate foundation types) |
| Area below roof/ceilings | 1,200sf, 70% with attic, 30% cathedral | 960sf, 50% with attic, 50% cathedral |
| Perimeter Length | 140ft | 128lf (excluding garage) |
| Gross Wall Area | 2,380sf | 2,525sf |
| Window Area (relative to gross wall area) | 15% (357sf) | 15% (379sf) |
| Door Area | 42sf | 40sf (excluding garage doors) |
| Net Wall Area | 1,981sf | 2,106sf |
| Internal Gains | 91,346 Btu/day | Unknown |
| Heating System | Natural Gas Furnace. 78 AFUE | Natural Gas Furnace. 78 AFUE |
| Cooling System | Central AC, 13 SEER | Central AC, 13 SEER |
| Water Heating | Natural Gas | Natural Gas |

2.4 PROTOTYPE HOME ESTIMATE AND ALTERNATES ANALYSIS

2.4.1 The detailed baseline Prototype Home Estimate is included in Appendix A to this Report. Further to this and in accordance with the requirements of Subtask 1, Faithful+Gould has completed cost estimates of the Prototype Home with five different foundation types. These foundation types are as follows:

2.4.1.1 Vented Crawlspace

- 2.4.1.2 Unvented (conditioned) crawlspace
 - 2.4.1.3 Slab-on-grade
 - 2.4.1.4 Heated basement with wall insulation
 - 2.4.1.5 Unheated basement with insulation in the floor above the basement
- 2.4.2 The alternate cost of the Prototype Home Estimate with each foundation type is summarized below. The cost detail associated with each estimate is provided in Appendix A to this report.

Table 2.4.2 Cost Summary of Prototype Home by Foundation Type

| SYSTEM | SYSTEM DESCRIPTION | Slab-on-Grade | Unvented Crawlspace | Vented Crawlspace | Unheated Basement | Heated Basement |
|--|----------------------------------|----------------|---------------------|-------------------|-------------------|-----------------|
| A10 | FOUNDATIONS | 17,346 | 11,264 | 11,079 | 14,394 | 14,394 |
| A20 | BASEMENT CONSTRUCTION | - | 4,322 | 4,092 | 7,914 | 10,110 |

| CONTINGENCIES/ESCALATION | | | | | | |
| | Design & Pricing Contingency | 4,370 | 4,495 | 4,503 | 4,939 | 4,991 |
| | Escalation | 1,017 | 1,046 | 1,048 | 1,149 | 1,161 |
| TOTAL CONSTRUCTION COST | | 199,403 | 205,104 | 205,483 | 225,374 | 227,738 |
| TOTAL \$ /GSF | | 82.47 | 84.82 | 84.98 | 93.21 | 94.18 |

- 2.4.3 In addition to Table 2.4.2, the cost impact of a required increase in R-value of exterior wall assemblies has been examined, where the increase directly impacts framing size due to the consequential thickness change in insulation.

For example, the increased the R-value for Wood Frame Walls from R-13 to R-21 impacts the thickness of insulation of approximately 3.5" to 6.5" and hence the required framing size. The cost analysis summarizes this impact in terms of cost per square foot of the total exterior wall assembly and the likely total construction cost impact based upon the Prototype Home design. The analysis considers an increase of stud spacing from 16" on centers to 24" on centers where the framing size adjusts from 2"x4" to 2"x6".

Figure 2.4.3.1 below illustrates the impact in terms of cost per square foot of the assembly.

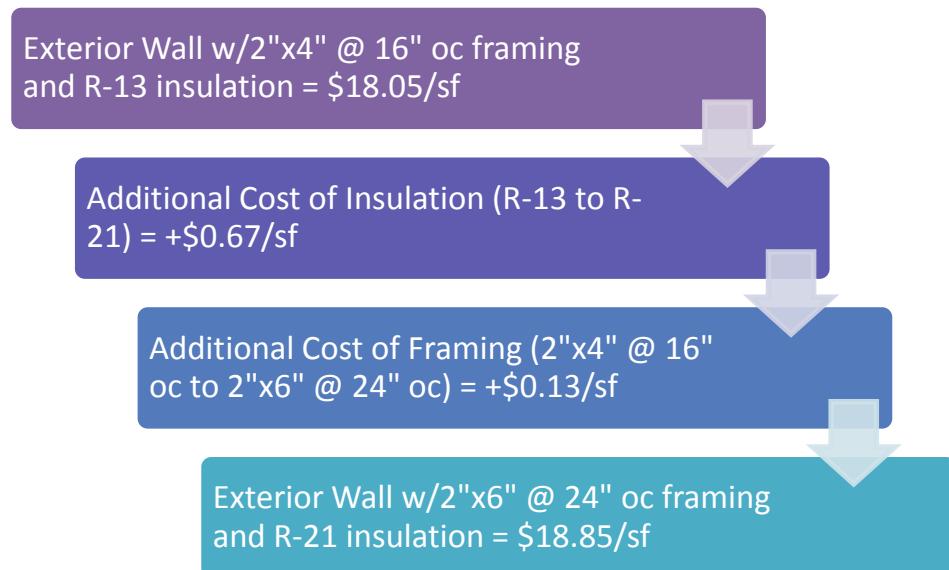

Figure 2.4.3.1 cost/sf Exterior Wall Code Impact

Figure 2.4.3.2 below is an illustration of the potential total cost impact, as applied to the Prototype Cost Model. In these illustrated costs, all other components are a constant. In comparison the cost of R-21 with 2x6" framing at 16" oc is estimated to be \$18.85/sf.

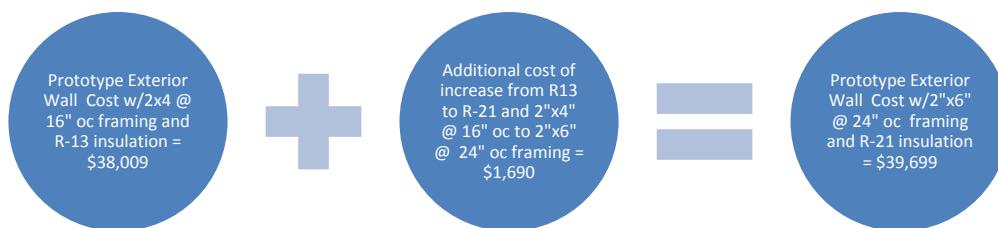

Figure 2.4.3.2 Total Cost Impact on Exterior Wall

Appendix D details the individual costs and quantities of the various components that are included in the analysis (Table 2.4.3.2). This Appendix includes cost estimates for additional assembly configurations, including those for Wood Frame Walls shown in the table in Section 5 below.

2.5 PRELIMINARY DATA FOR THE 2009 IECC

- 2.5.1 The cost data compiled for energy efficiency codes is based upon the minimum requirements stated in Chapter 4 (Residential Energy Efficiency) of the 2009 IECC (International Energy Conservation Code).
- 2.5.2 Summary cost data with code specific parameters for each Climate Zone are shown in Table 2.5 below.

Table 2.5 Preliminary Data for Prototype Costs by Climate Zone

| Category | Wood Frame Wall R-Value (Cost Model) | Wood Frame Wall R-Value (2009 IECC) | Ceiling R-Value (Cost Model) | Ceiling R-Value (2009 IECC) | Fenestration U-Value (Cost Model) | Fenestration U-Value (2009 IECC) | *Exterior Wall Assembly (\$ per sf of exterior wall area) | *†Roof Construction Assembly (\$ per sf of roof area) | *Fenestration (\$ per sf of fenestration area) | *Total Estimated Construction Cost of Prototype Home |
|-----------------------------|--------------------------------------|-------------------------------------|------------------------------|-----------------------------|-----------------------------------|----------------------------------|---|---|--|--|
| Prototype - Heated Basement | **19 | n/a | 44 | n/a | n/a | n/a | \$ 18.30 | \$ 6.60 | \$ 45.57 | \$ 227,738 |
| Climate Zone #1 | 13 | 13 | 30 | 30 | 0.42 | 1.20 | \$ 18.05 | \$ 6.40 | \$ 34.42 | \$ 208,829 |
| Climate Zone #2 | 13 | 13 | 30 | 30 | 0.42 | 0.65 | \$ 18.05 | \$ 6.40 | \$ 34.42 | \$ 188,502 |
| Climate Zone #3 | 13 | 13 | 30 | 30 | 0.42 | 0.50 | \$ 18.05 | \$ 6.40 | \$ 34.42 | \$ 222,880 |
| Climate Zone #4 | 13 | 13 | 38 | 38 | 0.30 | 0.35 | \$ 18.05 | \$ 6.56 | \$ 36.24 | \$ 232,248 |
| Climate Zone #5 | 13+5 | 20 or 13+5 | 38 | 38 | 0.30 | 0.35 | \$ 18.96 | \$ 6.56 | \$ 36.24 | \$ 230,575 |
| Climate Zone #6 | 13+5 | 20 or 13+5 | 49 | 49 | 0.30 | 0.35 | \$ 18.96 | \$ 6.68 | \$ 36.24 | \$ 210,072 |
| Climate Zone #7 & 8 | **21 | **21 | 49 | 49 | 0.30 | 0.35 | \$ 18.85 | \$ 6.68 | \$ 36.24 | \$ 259,166 |

*Costs based on the Cost Model

**R-19 and R-21: framing at 24" oc, all others at 16" oc

†Roof Construction Assembly costs are calculated per square foot of roof area and not per square foot of insulated ceiling area

Costs in the above Table 2.5 are based upon the Prototype Cost Estimate for the foundation type, ‘Heated Basement’. The “Total Estimated Construction Cost of Prototype Home” has been calculated in accordance with the 2009 IECC Energy Efficiency Codes. Cost per square foot illustrations for exterior walls, roof construction and fenestration are based upon a total assembly.

Refer to Section 5, Subtask 4 for the specific U-factor and R-value costs for each Climate Zone criteria under the 2006, 2009 and 2012 IECC.

Refer to Appendix F for Geo-Modifier Data Tables.

2.6 COST DATABASE FOR VARIOUS PUBLISHED CODES/STANDARDS DESCRIPTIONS

- 2.6.1 Cost data has been collected for various component types as listed in the Task Order. These component types include insulation, fenestration, doors, air infiltration (sealing), lighting and mechanical.
- 2.6.2 Cost data is listed in Appendix C to this Report. The cost data for solar and ground source heat pumps have been combined with the data for Subtask 2 and is included within Appendix E to this Report.

3 Subtask 2: Cost Data Collection For 50 % Better Code Development Description

- 3.2 The cost data within this Section is based upon initial efforts to compile information that will be used to advance residential codes to 50% better, including support for IECC 2015 for residential buildings.
- 3.3 Per the requirements of the Work Order, categories investigated for compilation of cost data include:
 - 3.3.1 Super High R-Values
 - 3.3.2 Solar Control Options
 - 3.3.3 Combined space/water heating systems
 - 3.3.4 Ductless Systems
 - 3.3.5 Heat Pump Water Heaters
 - 3.3.6 Desuperheaters
 - 3.3.7 Instantaneous Water Heaters
 - 3.3.8 Solar Assisted Water Heaters
 - 3.3.9 Geothermal Source Heat Pumps
 - 3.3.10 Commissioning
 - 3.3.11 Refrigerant Charge Testing
 - 3.3.12 Air system balancing
- 3.4 The preliminary cost data includes for purchase costs and labor installation hours, based upon a nationwide average. This data collection will be advanced to include for total labor and installation costs, including subcontractor overhead and profit and general conditions. Allowances for escalation and design contingency have also been included. Costs do not include for pipe and electrical connections, except where noted.
- 3.5 It is envisaged that in the future, these costs shall be used to calculate complete installation “assemblies” for potential incorporation within various ‘cost model scenarios’ and could include lifecycle cost analysis.
- 3.6 The cost data gathered is detailed in Appendix E.

4 Subtask 3: Raw Data Submitted in Comma-Delimited Format

4.1 This Subtask consists of the Prototype Home Estimate ‘Heated Basement’ (Subtask 1) and Cost Data Collection (Subtask 2) files submitted in comma-delimited (.csv) format. These files have been provided as separate attachments to this report.

5. Subtask 4: Cost Data for the 2006 and 2012 IECC

5.1 Subtask 4 expands upon the data provided in Subtask 2 and compares estimated costs for the 2006 and 2012 IECC. For summary purposes, we have included here the 2009 IECC data obtained in the deliverable for Subtask 2. All costs are represented as present day.

5.2 In the charts below, the insulation and fenestration requirements have been compared by Climate Zone and IECC requirement. Costs are listed by U-Factor and by SHGC, are mutually exclusive, and should not be considered as either an addition to or subtraction from one another.

Table 5.2.1 Fenestration Costs by U-Factor per Square Foot by Climate Zone

| Fenestration U -Factor | 2006 IECC | | 2009 IECC | | 2012 IECC | |
|-------------------------------|-----------|----------|-----------|----------|-----------|----------|
| | U-Factor | \$/sf | U-Factor | \$/sf | U-Factor | \$/sf |
| Climate Zone #1 | 1.20 | \$ 29.84 | 1.20 | \$ 29.84 | NR | \$ - |
| Climate Zone #2 | 0.75 | \$ 32.53 | 0.65 | \$ 33.12 | 0.40 | \$ 34.62 |
| Climate Zone #3 | 0.65 | \$ 33.12 | 0.50 | \$ 34.02 | 0.35 | \$ 34.91 |
| Climate Zone #4 except Marine | 0.40 | \$ 34.62 | 0.35 | \$ 34.91 | 0.35 | \$ 34.91 |
| Climate Zone #5 and Marine 4 | 0.35 | \$ 34.91 | 0.35 | \$ 34.91 | 0.32 | \$ 35.09 |
| Climate Zone #6 | 0.35 | \$ 34.91 | 0.35 | \$ 34.91 | 0.32 | \$ 35.09 |
| Climate Zone #7 and 8 | 0.35 | \$ 34.91 | 0.35 | \$ 34.91 | 0.32 | \$ 35.09 |

- Fenestration costs per square foot are based upon an average cost of Jeld-Wen premium vinyl casement window sizes ranging from 24"x42" to 72"x60"
- Cost estimates include for purchase and installation
- The costs for the IECC U-factor of 0.32 are based upon a component product with a U-factor of 0.30

Table 5.2.2 Fenestration Costs by SHGC per Square Foot by Climate Zone

| Glazed Fenestration SHGC | 2006 IECC | | 2009 IECC | | 2012 IECC | |
|-------------------------------|-----------|----------|-----------|----------|-----------|----------|
| | SHGC | \$/sf | SHGC | \$/sf | SHGC | \$/sf |
| Climate Zone #1 | 0.40 | \$ 27.62 | 0.30 | \$ 30.39 | 0.25 | \$ 31.77 |
| Climate Zone #2 | 0.40 | \$ 27.62 | 0.30 | \$ 30.39 | 0.25 | \$ 31.77 |
| Climate Zone #3 | 0.40 | \$ 27.62 | 0.30 | \$ 30.39 | 0.25 | \$ 31.77 |
| Climate Zone #4 except Marine | NR | \$ - | NR | \$ - | 0.40 | \$ 27.62 |
| Climate Zone #5 and Marine 4 | NR | \$ - | NR | \$ - | NR | \$ - |
| Climate Zone #6 | NR | \$ - | NR | \$ - | NR | \$ - |
| Climate Zone #7 and 8 | NR | \$ - | NR | \$ - | NR | \$ - |

- Estimated costs are based upon interpolation of a quote containing multiple efficiency values and scenarios of various vinyl casement windows

Table 5.2.3 Blown Ceiling Insulation Costs by R-Value per Square Foot by Climate Zone

| Ceiling R-Value | 2006 IECC | | 2009 IECC | | 2012 IECC | |
|-------------------------------|-----------|---------|-----------|---------|-----------|---------|
| | R-Value | \$/sf | R-Value | \$/sf | R-Value | \$/sf |
| Climate Zone #1 | 30 | \$ 1.05 | 30 | \$ 1.05 | 30 | \$ 1.05 |
| Climate Zone #2 | 30 | \$ 1.05 | 30 | \$ 1.05 | 38 | \$ 1.33 |
| Climate Zone #3 | 30 | \$ 1.05 | 30 | \$ 1.05 | 38 | \$ 1.33 |
| Climate Zone #4 except Marine | 38 | \$ 1.33 | 38 | \$ 1.33 | 38 | \$ 1.33 |
| Climate Zone #5 and Marine 4 | 38 | \$ 1.33 | 38 | \$ 1.33 | 49 | \$ 1.61 |
| Climate Zone #6 | 49 | \$ 1.61 | 49 | \$ 1.61 | 49 | \$ 1.61 |
| Climate Zone #7 and 8 | 49 | \$ 1.61 | 49 | \$ 1.61 | 49 | \$ 1.61 |

- Estimated costs for ceiling R-values are based upon blown cellulose
- Other cost impacts include framing spacing and ceiling drywall thickness. R-38 may require either 5/8" thick drywall or framing at 16" oc due to weight i.e. drywall sag risk w/ ½" thick board on 24" oc framing

Table 5.2.4 Exterior Insulation in Wood Frame Wall by R-Value per Square Foot by Climate Zone

| Wood Frame Wall R-Value | 2006 IECC | | | 2009 IECC | | | 2012 IECC | | |
|-------------------------------|------------|------------------|--------------------|------------|------------------|--------------------|---------------|------------------|--------------------|
| | R-Value | Insulation \$/sf | Assembly \$/sf | R-Value | Insulation \$/sf | Assembly \$/sf | R-Value | Insulation \$/sf | Assembly \$/sf |

| Climate Zone #5 and Marine 4 | 19 or 13+5 | \$0.63 or \$1.20 | \$18.30 or \$18.84 | 21 or 13+5 | \$1.18 or \$1.30 | \$18.85 or \$18.84 | 21 or 13+5 | \$1.18 or \$1.30 | \$18.85 or \$18.84 |
| Climate Zone #6 | 19 or 13+5 | \$0.63 or \$1.20 | \$18.30 or \$18.84 | 21 or 13+5 | \$1.97 or \$1.93 | \$19.64 or \$19.47 | 21+5 or 13+10 | \$1.97 or \$1.93 | \$19.64 or \$19.47 |
| Climate Zone #7 and 8 | 21 | \$1.18 | \$18.85 | 21 | \$1.18 | \$18.85 | 21+5 or 13+10 | \$1.97 or \$1.93 | \$19.64 or \$19.47 |

- R-5 and R-10 exterior insulation type for wood is extruded polystyrene sheathing (XPS)
- The assembly cost estimate for R-13 Interior cavity insulation is based upon 2"x4" framing at 16" oc.
- The assembly cost estimate for R-19 and R-21 cavity insulation is based upon 2"x6" framing at 24" oc.
- The cost estimate detail for the above assemblies is included in Appendix D.
- Additional costs may be applicable for installing 1"x4" furring strips (estimated at \$0.87/lf) between siding and foam sheathing. Work to foam sheathing may be labor intensive at areas of trim and opening details. Faithful+Gould estimates that complexity at these areas may add up to 50% labor costs.
- For R-20 insulation assume R-21 as it is readily available
- For additional flashing add \$4.22/sf of coverage area

Table 5.2.5 Exterior Insulation in Steel Frame Wall by R-Value per Square Foot by Climate Zone

| Steel Frame Wall R-Value | 2006 IECC | | 2009 IECC | | 2012 IECC | |

| Climate Zone #7 and 8 | 10/13 | \$1.52 or \$0.51 | 15/19 | \$2.02 or \$0.77 | 15/19 | \$2.02 or \$0.77 |

- Exterior insulation type is rigid board for walls, Extruded polystyrene (XPS), 25 PSI compressive strength
- Interior cavity insulation is fiberglass, kraft faced
- The illustration below shows a typical below grade application for an example exterior insulating product such as R-Tech® X
- Incremental cost for R-19 includes increase from 2x4 to 2x6 framing
- The above estimated costs are for installed insulation only
- For trowel-applied acrylic foundation coating, add \$1.40/sf of coverage area
- For additional flashing add \$4.22/sf of coverage area

Typical Below Grade Application

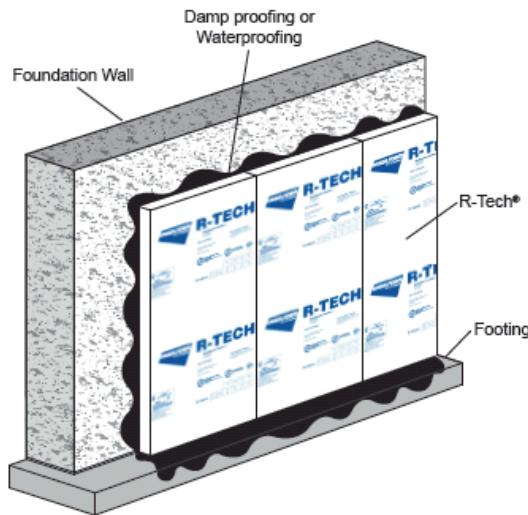

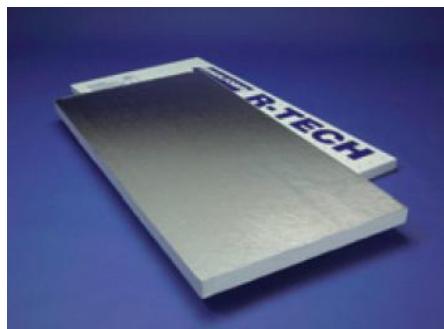

Table 5.2.9 Slab Edge Insulation by R-Value per Linear Foot by Climate Zone

| Slab R-Value & Depth | 2006 IECC | | 2009 IECC | | 2012 IECC | |
|-------------------------------|-----------|---------|-----------|---------|-----------|---------|
| | R-Value | \$/lf | R-Value | \$/lf | R-Value | \$/lf |
| Climate Zone #1 | - | \$ - | - | \$ - | - | \$ - |
| Climate Zone #2 | - | \$ - | - | \$ - | - | \$ - |
| Climate Zone #3 | - | \$ - | - | \$ - | - | - |
| Climate Zone #4 except Marine | 10, 2ft | \$ 3.24 | 10, 2ft | \$ 3.24 | 10, 2ft | \$ 3.24 |
| Climate Zone #5 and Marine 4 | 10, 2ft | \$ 3.24 | 10, 2ft | \$ 3.24 | 10, 2ft | \$ 3.24 |
| Climate Zone #6 | 10, 4ft | \$ 6.48 | 10, 4ft | \$ 6.48 | 10, 4ft | \$ 6.48 |
| Climate Zone #7 and 8 | 10, 4ft | \$ 6.48 | 10, 4ft | \$ 6.48 | 10, 4ft | \$ 6.48 |

- Costs above indicate \$/lf based on insulation in 2'-0" or 4'-0" wide increments
- The costs above are for slab edge insulation type consisting of 2" thick R-10 extruded polystyrene 60 PSI compressive strength. R-5 to the edge of heated slabs is \$0.91/sf
- The above estimated costs are for installed insulation only
- Products such as R-Tech® X are available for under-slab / slab edge applications and consist of “superior closed-cell, lightweight and resilient expanded polystyrene (EPS) with advanced polymeric laminate facers”. A typical application is illustrated by the manufacturer below

Typical Under Slab Application

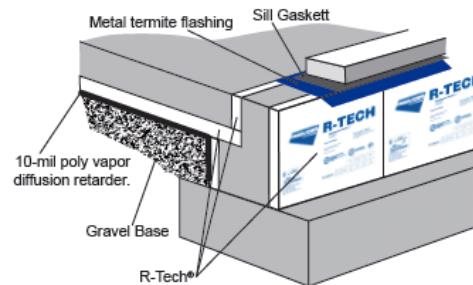

Table 5.2.10 Exterior Insulation in Crawlspace Wall by R-Value per Square Foot by Climate Zone

| Crawlspace Wall R-Value | 2006 IECC | | 2009 IECC | | 2012 IECC | |
|-------------------------------|-----------|------------------|-----------|------------------|-----------|------------------|
| | R-Value | \$/sf | R-Value | \$/sf | R-Value | \$/sf |
| Climate Zone #1 | - | \$ - | - | \$ - | - | \$ - |
| Climate Zone #2 | - | \$ - | - | \$ - | - | \$ - |
| Climate Zone #3 | 5/13 | \$0.91 or \$0.51 | 5/13 | \$0.91 or \$0.51 | 5/13 | \$0.91 or \$0.51 |
| Climate Zone #4 except Marine | 10/13 | \$1.52 or \$0.51 | 10/13 | \$1.52 or \$0.51 | 10/13 | \$1.52 or \$0.51 |
| Climate Zone #5 and Marine 4 | 10/13 | \$1.52 or \$0.51 | 10/13 | \$2.02 or \$0.77 | 15/19 | \$2.02 or \$0.77 |
| Climate Zone #6 | 10/13 | \$1.52 or \$0.51 | 15/19 | \$2.02 or \$0.77 | 15/19 | \$2.02 or \$0.77 |
| Climate Zone #7 and 8 | 10/13 | \$1.52 or \$0.51 | 15/19 | \$2.02 or \$0.77 | 15/19 | \$2.02 or \$0.77 |

- Exterior Insulation type is expanded polystyrene sheathing (EPS)
- Interior cavity insulation is fiberglass, kraft faced
- The above estimated costs are for installed insulation only
- For trowel-applied acrylic foundation coating, add \$1.40/sf of coverage area
- For additional flashing add \$4.22/sf of coverage area

Table 5.2.11 Incremental Cost per Square Foot for Framing Depth Changes

| 12" O/C | \$/sf | 2x4 | 2x6 | 2x8 | 2x10 | 2x12 |
|---------|--------|----------|----------|----------|--------|----------|
| 2x4 | \$2.06 | - | \$0.47 | \$2.73 | \$4.62 | \$4.58 |
| 2x6 | \$2.53 | (\$0.47) | - | \$2.26 | \$4.15 | \$4.10 |
| 2x8 | \$4.79 | (\$2.73) | (\$2.26) | - | \$1.89 | \$1.84 |
| 2x10 | \$6.68 | (\$4.62) | (\$4.15) | (\$1.89) | - | (\$0.04) |
| 2x12 | \$6.64 | (\$4.58) | (\$4.10) | (\$1.84) | \$0.04 | - |
| 16" O/C | \$/sf | 2x4 | 2x6 | 2x8 | 2x10 | 2x12 |
| 2x4 | \$1.78 | - | \$0.41 | \$2.36 | \$4.00 | \$3.96 |
| 2x6 | \$2.19 | (\$0.41) | - | \$1.95 | \$3.59 | \$3.55 |

- Exterior insulation type is rigid board for walls, extruded polystyrene (XPS), 25 PSI compressive strength
- Interior cavity insulation is fiberglass, kraft faced. R-21 is foil faced.
- The above estimated costs are for wall structure, framing for batt insulation applications only, and installed insulation only; does not include any finishing costs including gypsum wall board or exterior cladding
- For trowel-applied acrylic foundation coating, add \$1.40/sf of coverage area
- For additional flashing add \$4.22/sf of coverage area

6. Subtask 5: Report on Data Additional to Subtask 2

6.2 All cost data applicable to Subtask 2 and Subtask 5 has been consolidated and detailed in Appendix E.

7 Subtask 6: Raw Data Submitted in Comma-Delimited Format

7.2 This Subtask has been consolidated with the above Subtask 3.

8 APPENDICES

8.1 Appendices are listed as follows:

Detailed Cost Estimate

INTRODUCTION

Project Description

In brief, the project comprises the construction of a new 2,418 gsf single family home. Cost includes attached 3-car garage as unconditioned space.

This document is based on the measurement and pricing of quantities wherever information is provided and/or reasonable assumptions for other works not covered in the drawings and programs as stated in this document. The unit rates reflected herein have been obtained from industry recognized sources and have been normalized to indicate a national average cost for the scope of work. All unit rates relevant to subcontractor works include the subcontractors' overhead and profit.

Basis of Pricing

Pricing shown reflects probable construction costs for 1st quarter 2011 and are based on a nationwide average. This estimate is a determination of fair market value for the construction of this project. It is not a prediction of low bid. Pricing assumes competitive bidding for every portion of the construction work for all subcontractors, that is to mean 4 to 5 bids. If fewer bids are received, bid results can be expected to be higher.

Subcontractor's markups have been included in each line item unit price. These markups cover the cost of the field overhead, home office overhead, and profit. These markups can range from 5% to 15% of the cost for that particular item of work. The rates that have been established are for budgetary purposes only and are not to be used to establish the cost of additions or deletions to the scope of work that may rise during the actual construction process.

General Contractor's General Conditions, Overhead and Profit are calculated at 11%

Documentation

Estimate is based upon PLAN # 970605 dated 6/22/1997

Estimate assumes that the basement and "Future" spaces are unfinished.

Design/ Pricing Contingency

A 2.5% Pricing contingency has been included in the estimate, reduced from 5% at the Design Development level. This contingency should reduce to zero at bid stage, but the monies identified are likely to be absorbed in the detail "above-the-line".

Escalation

Escalation is included at 0.52%, based on 2.5% per annum, to the construction midpoint based on a four month schedule in summer of 2012.

Residential Single Family Home

Detailed Cost Estimate

INTRODUCTION

Items excluded from the Cost Estimate

Design, engineering and consultant fees
Testing and inspection
Fire and all risk insurance
Construction contingency
Owner's contingency
Loose furniture, fittings and equipment (FF&E)
Moving costs
Artwork
Interior Plants
Window Treatments

Items that may affect the cost estimate

Modifications to the scope of work included in this estimate.
Special phasing requirements.
Restrictive technical specifications or excessive contract conditions.
Any other non-competitive bid situations.

Statements of Probable Cost

Faithful+Gould has no control over the cost of labor and materials, general contractor's or any subcontractor's method of determining prices, or competitive bidding and market conditions. This opinion of probable cost of construction is made on the basis of the experience, qualifications, and best judgment of the professional consultant familiar with the construction industry. Faithful+Gould cannot and does not guarantee that proposals, bids, or actual construction costs will not vary from this or subsequent cost estimates.

Faithful+Gould's staff of professional cost consultants has prepared this estimate in accordance with generally accepted principles and practices. This staff is available to discuss its contents with interested personnel.

Recommendation for Cost Control

Faithful+Gould recommends that the Owner carefully review this document, including line item descriptions, unit prices, clarifications, exclusions, inclusions and assumptions, contingencies, escalation and markups. If the project is over budget, or if there are unresolved budgeting issues, alternate systems schemes should be evaluated before proceeding further into the design phase.

Requests for modifications of any apparent errors or omissions to this document must be made to within ten (10) days of receipt of this estimate. Otherwise, it will be understood that the contents have been concurred with and accepted.

* Shear Bracing Options - These systems utilize strategic bracing and rigid insulation sheathing in lieu of traditional methods (full sheathing enclosure), these types of construction are typically engineered by qualified and certified design professionals. Assumes 20% OSB coverage at "OSB Only at Critical Areas" options.

APPENDIX E

COST DATA FOR 50% BETTER CODE DEVELOPMENT

| Component | Tag | Cost Unit | Labor Hours | Material | Installation | Equipment | Total Cost | Energy Measure |
|-----------------------------|--|-----------|-------------|-------------|--------------|-----------|-------------|---|
| Super high R-values | 10 1/4" (260 mm) thick SIP with R-value of 38.0 at 75oF and an R-value of 39.0 at 40 oF | sf | 0.020 | \$ 5.04 | \$ 0.69 | \$ - | \$ 5.73 | R-39 |

APPENDIX F

GEO-MODIFIER DATA TABLES

The compiled cost data for energy efficiency codes and the estimated cost for a Prototype Single-Family Home have been applied geographical cost modifiers for the purposes of comparing costs both across and within Climate Zones. For this cost illustration the foundation type estimate of '*Heated Basement*' has been used. The estimate has been modified in accordance with the 2009 IECC for each Climate Zone to establish a baseline for application of factors.

The current geo-modifiers are based upon RSMeans data and may vary due to unique local conditions and requirements.
